📍 Ghaziabad, Uttar Pradesh

Education

Kiet Group Of Institutions , Ghaziabad (201206)

Sept 2023- Aug 2027
7.5

Bachelor of Technology (Computer Science and Engineering)

Coursework: Data Structures , Database Management Systems (DBMS) , Software Engineering

Technical Skills

- **Languages** : Java , Javascript, C++, Python
- **Frontend** : HTML, React.js, Tailwind CSS
- **Backend** : Node.js, Express.js , JWT , Sockets.io
- **Tools** : Postman, Github , Render , VS Code
- **Databases** : MongoDB

Experience

MLSA INTERNSHIP , KIET GROUP OF INSTITUTIONS

October 2024- November-2024

- Completed the MLSA KIET Internship in Full Stack Web Development, where I developed dynamic web applications using HTML, CSS, and JavaScript. Strengthened my problem-solving skills by working on real-world projects and building responsive user interfaces.
- Learned the basics of GitHub during the internship and applied them to manage my code through version control. While improving my own understanding, I also assisted peers in understanding foundational GitHub usage, which enhanced my communication skills and reinforced my learning through peer support.

Projects

AI Diet & Nutrition Optimizer | MERN Stack, Machine Learning, MongoDB | GitHub

- Designed an AI-driven meal planning engine that generates protein-optimized diet plans based on user goals such as muscle gain, fat loss, and maintenance.
- Implemented machine learning models (classification and regression) for meal recommendations using nutritional features including protein, calories, and macronutrient distribution.
- Developed RESTful APIs using Node.js and Express to handle user profiles, diet generation requests, and meal history tracking.
- Integrated MongoDB with optimized and indexed collections for users, meals, nutrition logs, and recommendations to ensure scalability.
- Built a modular backend architecture with input validation, ML inference integration, and role-based data access for maintainability and performance.

MedBrain | Node.js, JWT, MongoDB | GitHub

- Contributed to backend development of a MERN stack platform aimed at streamlining patient prescription and medical history management.
- Focused on backend technologies like Node.js, MongoDB, and Cloudinary, ensuring secure data storage and efficient access to medical documents.
- Implemented JWT-based authentication to ensure data privacy and enable secure, authorized access to past medical records.

ExtraCurricular / Certifications

- **Python Fundamentals – Infosys Springboard**: Gained hands-on understanding of core Python concepts, including control structures, functions, data types, and basic problem-solving.
- **Smart India Hackathon (SIH) – Participant**: Collaborated in a team-based national hackathon to analyze problem statements and propose technology-driven solutions within tight deadlines.
- **Innotech – Participant**: Participated in a technical innovation event, contributing to idea formulation and collaborative solution discussions.
